A Review on Role of Shaman Chikitsa in the Medoroga w.r.t to Dyslipidemia

Praveen Nandal a*, Sadhana Misar Wajpeyi a and Khushhali Balpande a

a Department of Kayachikitsa, Mahatma Gandhi Ayurveda College, Hospital & Research Center, Salod (H), Datta Meghe Institute of Medical Science (Deemed to be University), Wardha, India.

ABSTRACT

Background: Medoroga is a condition in which there is an excessive accumulation of Meda Dhatu in the body. Accumulation of Medo Dhatu in different parts of the body causes blockage of Strotas which ultimately leads to poor nourishment of other Dhatus. Lack of exercise and Kaphavardhak Ahar Viharar are the two main causes of Medoroga. In modern times, the way of life has changed drastically to quick nourishments and inactive tendencies throughout the world. Because of these factors, the accumulation of Meda Dhatu happens immensely. In Ayurveda, dyslipidemia is considered under Medoroga. Dyslipidemia is an emerging serious health abnormality associated with co-morbidities including CVD that continues to be the leading cause of death worldwide. It is characterized by an increase in cholesterol, triglycerides, LDL levels, and a decrease in HDL levels.

Aim and Objectives: This review are conducted with the aim to study the various formulations and drugs described for Medoroga (Dyslipidemia) as Shaman Chikitsa in Ayurveda.

Materials and Methods: The classical texts of Ayurveda and modern medicine, Journals, and Research articles from Google Scholar, Pubmed, etc were selected for the study.

Observations and Discussion: The research studies conducted on guggul formulations, Arogyavardhinivati, Triphala, Trikatu, Arjun, and Yava showed significant improvement in lipid levels which may be due to their Katu, Kashaya Rasa, Ushna, Teekshna Gun and Lekhana, Deepana, Pachana properties that help in reducing aggravated Kapha and Meda.

Conclusion: Dyslipidemia can be effectively managed with various formulations given in Ayurveda.

1. INTRODUCTION

India is undergoing a major epidemiological change as a consequence of elevated population, economic wealth, and modernization [1]. However, non-communicable diseases such as cerebrovascular, coronary, and peripheral artery disorders have shown its hike in the present era. When unhealthy lifestyles such as tobacco chewing and smoking, improper dietary habits, and sedentary lifestyles become more prevalent [2]. Noncommunicable illnesses have become the primary cause of death in India’s rural communities [3]. Medoroga (dyslipidemia) is a single contributory factor in the development of severe lifestyle disorders. It is defined by an elevation of serum levels of triglycerides, cholesterol, fat phospholipids. Lipids are naturally occurring substances that make up the structural framework of cell membranes. Snehatwa (lubricity) is the usual attribute of lipids [4]. Meda Dhatu, Vasa, and Majja have Snigdha (unctuous) property which can be similar to lipids. When lipids are in a healthy state, it performs its proper functions in the body like giving insulation to body parts, providing strength and energy, growth of body cells, and absorption of nutrients like fat soluble vitamins. Abnormal levels of Snigdha Dhatu lead to aggravation of Rasagata Sneha, causing Medodhatu Dushti (Dyslipidaemia) [5]. In many ancient literatures, Medoroga is described in details. Some of the etiological factors include a bad lifestyle plan, lack of physical activity, taking advantage of day sleep, and following a Kapha-inducing diet and carbohydrate food choices. An overabundance of Kapha and Meda Sadharmi Ansha (similar qualities) are the etiological factors, resulting in Kapha dominance Dosha Vridhha [6], which leads to Mandagni (diminished digestive fire). As a result, there is the formation of Ama that travels directly to Medodhatu, and along with Kapha, it causes Vridhha of Apachita Meda. It causes Srotasavrodha, which obstructs the path of dosha, thus Vayu comes into the koshta causing enhancement of jatharagni (an excessive increase of digestive fire), which induces food cravings and overeating, ultimately leading to Medoroga[7]. Infections and complexities that occur in Medoroga patients are more difficult to treat than those that occur in people who do not have Medoroga [8]. The disease dyslipidemia is not mentioned in Ayurveda. None the less, it can be linked to Medoroga based on its description. Hyperlipidemia and hyperlipoproteinemia are two types of dyslipidemia characterized by unusually high levels of lipoproteins in the blood [9]. Phospholipids, cholesterol, cholesterol esters, and triglycerides are all included in these lipids. There are five classes of lipoproteins namely- “High-Density-lipoprotein, Low-Density-lipoprotein, Intermediate-Density-lipoprotein, Very-low-Density-lipoprotein, and chylomicrons based on Density. Dyslipidemia is one of the major problems, defined by elevated levels of serum total cholesterol, LDL, or triglycerides, or both LDL and triglycerides, as well as a decrease in HDL, which contributes to atherosclerosis [10]. Dyslipidaemia is a multifactorial disorder mainly lifestyle and inherited factors are responsible for its causation. For Cardio-vascular Disorders Atherosclerosis is considered as a main risk factor [11]. According to the ICMR-INDIAN study, hypercholesterolemia was prevalent in 13.9 percent of the population, hypertriglyceridemia was prevalent in 29.5 percent, low HDL-C was prevalent in 72.3 percent, and high LDL-C levels were prevalent in 11.8 percent. Thus the aim of the study is to review and discuss the role of Shaman Chikitsa in Medoroga w.r.t to dyslipidemia.

1.1 Aim and Objectives

This review is conducted with the aim to study the various formulations and drugs described for Medoroga (Dyslipidemia) as Shaman Chikitsa in Ayurveda.

2. MATERIALS AND METHODS

The classical texts of Ayurveda and modern medicine, Journals, and Research articles from Google Scholar, Pubmed, etc were searched from Google scholar, PubMed and Research gate by keywords between the time period of 2010 to 2020. All research studies in which only Shamana chikitsa is given were randomly collected and included in this review.
3. OBSERVATIONS AND RESULTS

4. DISCUSSION

Dyslipidemia is a lifestyle disorder that is becoming more common and offers a serious health risk because it has no symptoms but can lead to fatal complications. Dyslipidemia, according to current thinking, is a disorder of lipoprotein metabolism, with the liver serving as the mainstay. As previously indicated, Dhamani Pratichaya is a form of Santaranjanaya. Apatarpana is included in the Samanya Chikitsa. The Shonitabhishyandana is followed by Dhamanipratichaya and Margavarana [12]. Aama Pachan and boosting Agni are the fundamental concepts for treating dyslipidemia. Ayurveda focuses on and related Dosha vitiation as the fundamental cause of disease. The major goal of treating Medoroga is to break the pathogenesis, which includes Nidana Parivarjana, restoration of Medodhatv agni to its normal state, balancing vitiated Doshas, i.e. Kapha and Vata, and correcting vitiated Medovasrota & Medodhatu [13]. Apatarpana Chikitsa mainly includes Lekhana and Karshana of aggravated Meda Dhatu. Drugs having Deepana, Pachana, Lekhana, and apatarpana properties are mainly indicated in the management of Medoroga.

Character of the Asanadi Ghanavati has Tikta, Kashaya rasa, and Katu Vipaka which helps in reducing Raktagatakleda and Meda. Thus, it reduces Medoshaitihilya. Asanadi Ghanavati most likely works at the Medodhatwagni level. Asana, one of the ingredients of Asanadi Ghanavati, has anti-hyperlipidemic effects [14]. Gomutra Haritaki has Katu, Rasa, Ushna Virya Doshanuloman, Dipana Pachana, Sroto Vibandhan Ahara, Pramehahara, and HridayaurahPralepahar properties which reduce Sama Sleshma and Apachita Medo Dhatu by increasing Jatharagni through Amapachana. Haritaki possesses anti-hyperlipidemic, anti-oxidant, cytoprotective, diabetic, cardioprotective, and hepatoprotective properties [15]. At the level of the colon and liver, Gomutra Haritaki helps the physiological digestive process. It also plays a role in lipid metabolism. It corrects the lipid metabolism and helps in balancing the lipid metabolism.
levels. *Gomutra* (bio enhancer) by its properties helps in maintaining serum lipid levels. Overall, *Gomutra Haritaki* has cardioprotective and hepatoprotective properties [16], as well as promoting proper digestion.

Terminalia Arjuna acts on atherosclerosis. It has *Lekhana* property so it does *Karshan of Meda in Dhamni*[17,18,19]. Kutki (*Picrorhiz kurrooa*) is the main ingredient of *Arogayvardhini* [20] which has *Lekhana, Medohara, Deepana, Pachana* properties. It mainly acts of liver metabolism and also has choleric effects. Other ingredients like *Triphala, Trikatu* helps in correcting deranged *Agni* and reduces excess *Meda* thus breaking *Samprapti of Medaroga*[21].

In *Medohara Guggulu*, *Suddha Guggulu* comprises of greater portion and other ingredients include *Sunthi, Pippali, Marich, Chitraka, Haritaki, Vibhitaki, Amalaki, Musta, Vaivindanga*. It has *Katu Rasa, Laghu Ruksha Guna, Ushna Veerya, Katuvipaka*, and hence it acts as *Kapha Vata Shamaka, Deepana, Paachana, Kleda-Meda Shoshaka, Srotovishodhaka* and *Lekhana*. As a result of all of these features, it aids in the removal of excess *Meda* and *Kapha*, as well as the breaking pathology of the disease.

*Tryushnadi Guggulu* contains the greatest quantity of *Guggulu* and it has *Medo-Vatahara Prabhava*[22]. Acharya *Sushruta* directly quoted the property of *Lekhana*[23]. In this formulation, all 8 ingredients have dominance of *Katu Rasa*, whereas three *Dravyas* have dominance of *Kashaya* and *Tikta Rasa*. *Tikta, Kashaya, katu Rasa* have the ability to pacify *Kapha Doshya*. *Katu Rasa* performs the functioning of *Agni Deepana* and *Mamsavilekhanam*, which helps to regulate the *Jatharagni* and thus corrects digestion producing proper *Ahar Rasa*, which then provides qualitative nourishment to the succeeding *Dhatus*. This also corrects *Dhatvagnimandya* and thereby helps in the removal of *Abaddha Mamsa-Meda Dhatu* from the body. *Tikta Rasa* possesses the qualities like *Deepana, Pachana, Kleda-Meda Shoshaka, Srotovishodhaka*, and *Lekhana* which help to break the pathophysiology of *Medoroga*. *Kashaya Rasa* possesses *Sharira-Kleda Shoshana* property which helps in reducing excessive *kleda* from the body. Thus, all the major *Rasas* in this formulation aids in the breaking of the disease formation process. In addition, the *Tryushnadi Guggulu* has *Laghu, Ruksha, and Tikshna Guna*, which aids in *Kapha-Meda Shamana* property and *Kledamedashoshana*. *Guggulu* has *Suksma property which helps in Bhedana of Avarana of Samana Vayu* (breaking the covering of *Saman Vayu*). Due to all these properties, *Tryushnadi Guggulu* can be used as an effective and safe medicine for the management of Dyslipidaemia.

*Triphala Churna* contains *Amalaki, Haritaki, and Vibhitaki* in equal proportion. *Amalaki* (*EmblicaOfficinalisL.*) has the ability to reduce fat and cholesterol absorption [24]. *Haritaki* (*Terminaliachebula*) can reduce triglycerides and LDL levels [25]. *Amalaki* helps in digestion, liver function, and hepatoprotection [26]. *Triphala* has rejuvenating and balancing effects on *Vata, Pitta*, and *Kapha*.

*Artharaksha Ghanavati* contains *Haritaki, Vacha, Rasna, Pippali, Shunti, Shati, and Pushkarmool*. These drugs possess *Katu, Tikta, Kashaya Rasa, Ushna, Ruksha, Kaphahara, Medohara, Raktashodhakand Snigdha* properties which causes *Kapha Vata Shamana*. [27]. *Guggulu* due to its *Lekhana* property used to reduce fat and to treat inflammation, arthritis, atherosclerosis, obesity, and hyperlipidemia [28].

*Yava* is *Kashaya, Ruksha, and lekhana properties. It is useful in Medoroga because it has *Kapha Pitta Shamak, Lekhana, Agnivardhak*, and *Medohar* properties [29]. *Yava* has *Agnivardhak* property which aids in the correction of *Agnimandya*, key factor in disease production. *Kapha, Medahar* property of *Yava* helps in the reduction of exacerbated *Kapha and Meda* and *Lekhana* property causes scraping and removal of excessive *Meda*, thus helps in clearing obstructed channels. The scraping action (*Lekhana*) of *Yava* removes *Meda* Accumulated in the walls of Dhamani.

*Trikatu* diminishes *Medodhatudue to Katu, TiktaRasa*, and *Katuvipaka*. *Rukshana, Lekhana Karshana, Deepana, Pachana and Shoshana* properties helps in breaking pathogenesis [30]. These pharmacological effects are due to chemical constituent’s like piperine, which aids in the improvement of *Jatharagni* function by promoting the digestive enzymes and enhancing their action in the gastrointestinal tract (digestive fire). Correction of *Jatharagni* aids in improving overall metabolism. *Lekhana* property help in reducing excessive accumulated *Kapha* and *Meda*. In a nutshell, *Trikatu* reduces lipid deposition and hence aids in the cleaning of obstructed channels [31].
In the above studies, all the drugs mentioned having Kashaya Katu Rasa, Ruksha Guna, Ushnavirya, Kaphamedahar, Lekhana, Deepana, and Pachana properties. All these properties help in correcting diminished Agni, balancing Kaphavata Dosha, and removing accumulated Meda thus clearing the obstructions from Stratos. Hence these drugs can be used effectively in the management of Medoroga (Dyslipidemia).

Most of the above mentioned studies are single arm so it can be conducted by taking standard control to prove the efficacy of these formulations. In most of the studies, lukewarm water is used as Anupana only in one study Triphala Kwatha is used as Anupana which gives good results. Also in the above studies the duration of study ranging between 30 days to 60 days. The sample size in the above reviewed articles was ranges between 20 to 149. In the above studies assessment of improvement was done by measuring values of objective criteria like BMI, serum lipid levels, and subjective criteria mentioned in Ayurveda. In all the above clinical trials significant improvement was observed after treatment.

Guggulu has been described as the best Dravya for obesity and dyslipidemia, but Bhavprakash quotes that Guggulu cannot be prescribed for a longer duration as it can lead to impotency and gastric irritation. SO other herbal drugs mentioned in Lekhaniya Mahakashaya having the same properties mentioned in the above studies can be used for a longer duration.

5. CONCLUSION

From the above review it can be concluded that various Guggul preparations, herbomineral and herbal formulations having Kaphamedahar, Deepan, Pachana, and Lekhana properties can be effectively used in the management of Medoroga (Dyslipidemia). All these drugs help in reducing BMI and correcting blood lipid levels. Hence it is recommended to conduct randomized control trials on a large sample size to prove the efficacy of Ayurveda drugs in the management of Medoroga (Dyslipidemia).
